INVENTORY DOWN 9 PERCENT: U.S. inventory of all hogs and pigs is estimated at 53.2 million head on December 1, 1982, according to the Crop Reporting Board. This is 9 percent below a year ago and 17 percent less than December 1, 1980.

--Breeding hog inventory at 7.31 million is 7 percent below last year and down 20 percent from two years ago.

--Market hog inventory at 45.9 million is 10 percent below a year earlier and 17 percent less than two years ago.

The 10 QUARTERLY STATES, with 41.9 million head on December 1, are down 9 percent from a year earlier and 15 percent less than December 1, 1980. These 10 States account for approximately 79 percent of the total U.S. hog and pig inventory.

1982 PIG CROP: The U.S. pig crop for 1982 totaled 84.1 million head, 10 percent below 1981 and 17 percent below the 1980 pig crop.

--December 1981 - May 1982 pig crop, estimated at 41.0 million head, is down 14 percent from a year earlier and 22 percent below the comparable period two years ago.

--June-November 1982 pig crop, estimated at 43.1 million head, is 7 percent fewer than a year ago and 13 percent below the June-November 1980 crop.

A total of 5.81 million sows farrowed during June-November 1982, 7 percent fewer than a year earlier. The litter size during this period averaged 7.41 compared with 7.38 a year earlier.

In the 10 QUARTERLY STATES, the June-August 1982 pig crop totaled 16.3 million head, 10 percent below the same quarter a year ago. For the September-November period, the pig crop of 17.5 million head decreased 2 percent from the same period during 1981.

FARROWING INTENTIONS: U.S. hog producers intend to have 5.45 million sows farrow during the December 1982 - May 1983 period, 3 percent below a year ago and 15 percent fewer than two years ago.

Intentions in the 10 QUARTERLY STATES totaled 1.96 million sows to farrow during December 1982 - February 1983 period, 1 percent fewer than the same period last year. The March-May 1983 intentions, at 2.34 million, are 2 percent below the March-May 1982 quarter.

RELIABILITY AND ESTIMATING PROCEDURES: Primary data used in setting these hog estimates were obtained from a sample of farmers across the U.S. using probability surveys. Information was collected by mail, telephone and personal interviews. Since all operations raising hogs were not included in the sample, survey estimates are subject to sampling variability. This variability, as measured by the relative standard error, is about two percent at the U.S. level for hog inventory. This means that chances are approximately 95 out of 100 that survey estimates will be within four percent of the complete coverage value if the same procedures were used to survey all producers. Survey estimates are also subject to non-sampling errors such as omissions, duplications, and mistakes in reporting, recording and processing the data. These errors cannot be measured directly, but they are minimized through rigid quality controls in the data collection process and a careful review of all reported data for consistency and reasonableness.

The sampling variability of survey estimates on intended farrowings is slightly larger than that for inventories. More important, actual farrowings may differ significantly from reported intentions due to unexpected economic and environmental conditions. For second intentions these differences have exceeded four percent for about one-third of the quarterly pig crops during the last nine years. For first intentions these differences have exceeded seven percent for about one-third of the quarterly pig crops during the past nine years.

In setting the inventory estimates, the Crop Reporting Board constructed a U.S. balance sheet using estimates on births, deaths and check data on slaughter, imports and exports. This balance sheet provided an additional check on survey inventory estimates.
